

Robinhood Crypto Customer Code of Conduct

Robinhood Crypto customers agree to abide by the following rules of conduct to ensure that the Robinhood platform is not used for disruptive or manipulative purposes.

All orders that you place must be placed with the purpose of executing bona fide transactions. As a general rule, any trading activity that disrupts or manipulates cryptocurrency exchanges or other cryptocurrency service providers is prohibited. The list below of more specific prohibitions is not exclusive but is intended to provide more clarity on what types of trading activity are prohibited.

- Do not engage, or attempt to engage, in any fraudulent act, or any scheme to defraud, deceive, or trick.
- Do not harass, intimidate, or coerce another person, whether directly or indirectly, to manipulate an order (e.g., (1) to alter a price or quantity, (2) to choose a specific price or quantity, or (3) to cancel or maintain a pending order).
- Do not place orders for the purpose of generating unnecessary volatility or creating a condition in which prices do not or will not reflect fair market values are prohibited. This can include artificially buying and selling around the same price to artificially increase volume, splitting an order in order to create more trade executions and the appearance of more trading activity, or using successive trade executions to show artificial momentum in a particular direction.
- Do not place orders with the sole intent of canceling the bid or offer before execution.
- Any orders that have been pre-arranged with another person for the purpose of creating an artificial execution on any cryptocurrency exchange are prohibited.
- Do not place orders for the purpose of assisting another person to engage in transactions. This could interfere with customer identification and anti-money laundering programs.
- Do not place simultaneous buy and sell orders that could potentially execute against each other.
