

Fee Schedule

Effective: June 1, 2026

Clients of the investment dealer operated by Coinsquare Capital Markets Ltd. (“Coinsquare”) pay the following fees:

Robinhood Trading

Each client order includes a fee, levied in the fiat currency of the trading pair, of between 0.5% and 1.85% of the trade value. The fee is levied on the realized price that the firm is able to achieve for the client using a riskless principal trading model where an order is routed to the aggregation of liquidity providers that CCML maintains. Orders on the Robinhood system are routed based on a stack ranking of prices from the providers for the full amount of the trade, where the best provider for the execution of the entire client amount wins the order. The riskless principal orders are effectively market orders with a slippage limit of 1% on buys and 5% on sells. Any slippage within this range, or any price improvement, is passed on to the client.

Coinsquare Trade

On each request for quote made by a client in Coinsquare Trade, Coinsquare includes a disclosure of a "spread" ranging between 0.5% and 1.85%, barring adverse market conditions and/or liquidity not being readily available for a specific crypto asset pair in which case the spread may be increased up to an additional 2%. The spread is added to the best observed price at which Coinsquare can buy the crypto asset through its Liquidity Providers (third-party firms who do not provide quotes on a Canadian marketplace, but with which Coinsquare interacts to obtain liquidity), or subtracted from the best observed price at which it can sell the crypto asset through its Liquidity Providers. When the client accepts Coinsquare’s quote within ten (10) seconds of the quote being displayed to the client, Coinsquare completes the transaction as principal at the price quoted to the client. (However, the quote becomes stale and is replaced every ten (10) seconds until the client confirms it or decides not to trade at all.) No other transaction fees apply to such trades.

In times of extreme volatility, CCML reserves the right to not offer a quote.

Coinsquare Pro

Trades made through Coinsquare Pro are subject to transaction fees known as Maker and Taker fees. A “Maker” order is one that provides liquidity to the order book. A “Taker” order is typically immediately executed and removes liquidity from the order book.

Maker and Taker Fees are taken from the settlement amount of the trade. The applicable fee is calculated as a percentage of the total dollar amount of the trade, and the percentage that applies varies depending on the total dollar amount, as follows:

Pricing Tier	Taker Fee	Maker Fee
Standard rate	0.50%	0.50%

OTC

Coinsquare’s OTC services are used by institutional and high net-worth clients to execute orders that are generally larger than Coinsquare Trade orders and provide more personalized execution assistance and greater access to liquidity through designated representatives of Coinsquare. Coinsquare is the counterparty to each buy or sell OTC transaction initiated by a client. Coinsquare includes a spread in

the quoted price to the client. The spread ranges between 0.5% and 1.85% of the best observed price at which Coinsquare can buy or sell the crypto asset through its Liquidity Providers, barring adverse market conditions and/or liquidity not being readily available for a specific crypto asset pairs, in which case spread may be increased up to an additional 2%. Clients may accept or reject any quoted price. No other transaction fees apply to such trades.

Spreads

Coinsquare charges a mark-up spread of between 50 and 385 basis points from the offsetting prices that Coinsquare believes to be reasonable at the time of the transaction. The amount of the spread is based on a number of factors such as (1) the size of the client order, (2) price volatility, (3) available liquidity, and (4) price spread from the liquidity providers. For example, the Coinsquare mark-up spread might be larger for a large client order for a very volatile crypto asset with low liquidity and a wide price spread from the liquidity provider. Conversely, a small client order for a less volatile crypto asset with large liquidity and a tight spread would result in a tighter Coinsquare mark-up spread.

Deposit and Withdrawal Fees

Clients do not pay deposit fees for making fiat or crypto asset deposits.

Depending on the crypto asset and type of transfer, clients may be charged a fiat and crypto asset withdrawal fee. Such fees are disclosed to clients, both on the CCML website and when they request a withdrawal. The applicable fees for fiat and crypto asset withdrawals can be found here: <https://coinsquare.com/fees/>.

Foreign Exchange Fees

Coinsquare may apply a foreign exchange (“FX”) spread in a transaction if a customer deposits Canadian dollars and requests a purchase of a digital asset that trades in US dollars.

Coinsquare receives gross ETH rewards from its Custodian, BitGo. This means that BitGo’s fees are not removed on-chain from the total amount earned by the validator before the net amount is distributed to CCML, which is unlike most of the other assets offered for staking through the Coinsquare platform. CCML removes the fee as per our agreement with BitGo, then also removes the CCML fee as explained below, and distributes the remaining amount proportionally to each user that had assets staked for the entirety of the period in which the rewards were earned. BitGo’s fees are paid from CCML to BitGo on a monthly basis, equating to 9% of the gross rewards.

General Staking Fee

Coinsquare charges a staking fee of up to 30% on all staking rewards received from any crypto you stake on the platform.

When crypto is staked on the platform, third-party validators and custodians providing services also charge fees that represent a percentage of the staking rewards received. The staking fee that Coinsquare charges you does not include the fees charged by any validator or custodian in connection with providing the staking services.

When you stake crypto through Coinsquare, Coinsquare charges a fee as a percentage of the staking rewards received by its custodian. Staking rewards and fees vary by token.

For ADA, ATOM, DOT, NEAR, and SOL:

- Coinsquare receives net rewards from its Custodian, BitGo. This means that BitGo’s fees of 9% of gross rewards are removed on-chain from the total amount earned by the validator before the net amount is distributed to CCML. CCML then takes the amount received, removes the fee

as explained below, and distributes the remaining amount proportionally to each user that had assets staked for the entirety of the period in which the rewards were earned.

For POL:

- Coinsquare receives POL rewards from its Custodian, BitGo, with a portion of the rewards (7 - 8%) already removed on-chain. This means that a portion of BitGo's fees is not removed on-chain from the total amount earned by the validator before the net amount is distributed to CCML, which is unlike most of the other assets offered for staking through the Coinsquare platform. CCML removes the remaining fee (1-2%) as per our agreement with BitGo, then also removes the CCML fee as explained below, and distributes the remaining amount proportionally to each user that had assets staked for the entirety of the period in which the rewards were earned. BitGo's fees equate to 9% of the gross rewards.

For ETH:

- Coinsquare receives gross ETH rewards from its Custodian, BitGo. This means that BitGo's fees are not removed on-chain from the total amount earned by the validator before the net amount is distributed to CCML, which is unlike most of the other assets offered for staking through the Coinsquare platform. CCML removes the fee as per our agreement with BitGo, then also removes the CCML fee as explained below, and distributes the remaining amount proportionally to each user that had assets staked for the entirety of the period in which the rewards were earned. BitGo's fees are paid from CCML to BitGo on a monthly basis, equating to 9% of the gross rewards

After Coinsquare receives any staking rewards from its custodian, net of any fees charged by the relevant validator or custodian, Coinsquare will then apply its staking fee of up to 30% of the staking rewards earned during the period, prior to distributing any rewards to your account. Coinsquare may modify the specific staking fee for each crypto asset, within the 30% limit, at any time and within its discretion. The exact fee charged per network can be found at <https://coinsquare.com/fees/>. Any staking fees listed on your account statements and fee reports will only disclose the staking fees charged by Coinsquare.
